

Clouds on your horizon?

Association for Women in Computing - Puget Sound Chapter

Daniel A. Morgan | damorgan12c@gmail.com | www.morganslibrary.org

Clouds on your horizon?

Presented: Association for Women in Computing - 15 January, 2014

Daniel A. Morgan

Oracle ACE Director

Consultant to Harvard University

University of Washington Oracle Instructor, ret.

The Morgan of Morgan's Library on the web

Board Member: Western Washington OUG, ret.

Executive Board: Vancouver/Victoria OUGs

- 10g, 11g, 12c Beta Tester

Morgan's Library: www.morganslibrary.org

International Oracle Events 2013-2014 Calendar

Nov Dec Jan Feb Mar Apr May Jun Jul Aug Sep Oct

The Library

The library is a spam-free on-line resource with code demos for DBAs and Developers. If you would like to see Oracle database functionality added to the library ... just email us. Oracle 12.1.0.1.0 has been released and content will start showing up every day for weeks.

Training Events and Travels

- NZOUG, Auckland, New Zealand - 08 Nov
- AIQUG, Hyderabad, India - 8 - 9 Nov
- AUSOUG, Perth, Australia - 12-13 Nov
- JOUG, Tokyo, Japan - 13-15 Nov
- ACOUG, Beijing, China - 16-19 Nov
- ACOUG, Guangzhou, China - 19 Nov
- DOAG, Nurnburg, Germany - 19-21 Nov

Next Event: APAC New Zealand

Morgan

aboard USA-71

ORACLE ACE Director

Library News

- Morgan's Notepad vi (Blog)
- Join the Western Washington OUG
- Morgan's Oracle Podcast
- US Govt. Mil. STIGs (Security Checklists)
- Bryn Llewellyn's PL/SQL White Paper
- Bryn Llewellyn's Editioning White Paper
- Explain Plan White Paper

One Take-Away

Caveat Emptor

Daniel A. Morgan | damorgan12c@gmail.com | www.morganslibrary.org

Clouds on your horizon?

Presented: Association for Women in Computing - 15 January, 2014

Syllabus

- What is "the cloud"?
- The theory
- The reality
- Reality: Some graphic examples
- How to protect yourself and your organization

Choose poorly and it is a race to the bottom

Theory

Warning: The next set of slides are rated PG

What is "the cloud?"

- IaaS (Infrastructure as a Service)
- Naas (Network as a Service)
- Paas (Platform as a Service)
- SaaS (Software as a Service)
- Managed Services

- Private Clouds
- Public Clouds

Cloud: The Theory

- 1950s ... mainframe computers accessible via thin clients/terminals
- 1957 ... Service Bureau Corp. (SBC)
- 1961 ... John McCarthy writes: "computation may someday be organized as a public utility."
- 1966 ... Tymshare
- 1967 ... National CSS (purchased by D&B)
- 1990s .. Virtual Private Networks offered by Telcos
A cloud symbol was used to indicate the who was responsible for what part of the infrastructure
- 2116 ... Mainframe computers again?

Cloud: One of my 2006-7 presentation slides

Topology

Cloud: The Theoretical Value

- Agility
- Common APIs
- Cost Sharing
- Device and Location Independence
- Migration
- Monitoring
- Multitenancy = Shared Burden

- On-Demand Self Service
- Security
- Utilization Improvement

Cloud: The Theoretical Value

- Experts own and manage the data center
- You save money based on operations scale
- Server hardware choices are made by people who know what they are doing and buy in bulk
- Storage costs are a shared burden
- Network infrastructure is shared by multiple consumers
- Firewall protect everyone

- DNS Servers are managed by DNS admins
- Load Balancers make sure everyone gets the horsepower they pay for

Reality

Warning: The next slide is rated R

Cloud: The Reality

- No standards and no definitions
- No portability: Vendor lock-in
- No control over
 - infrastructure (servers, storage, network, firewall)
 - operating system versions
 - database versions
 - application and web server versions
 - patching and patching schedules
 - uptime (whatever that may be defined to mean)
- Are there financial savings?

I suspect not if you were doing things well in the first place

More Reality

Warning: The next set of slides are rated XXX

Dose of Reality #1

Configuration Management The Cloud meets the Puppet

DC2 Outage: But Hours Earlier

Questions You Need To Ask

- How is uptime defined?
- When the vendor says we guarantee 99.9% availability what does that mean?

Availability %	Downtime per year	Downtime per month*	Downtime per week
90% ("one nine")	36.5 days	72 hours	16.8 hours
95%	18.25 days	36 hours	8.4 hours
97%	10.96 days	21.6 hours	5.04 hours
98%	7.30 days	14.4 hours	3.36 hours
99% ("two nines")	3.65 days	7.20 hours	1.68 hours
99.5%	1.83 days	3.60 hours	50.4 minutes
99.8%	17.52 hours	86.23 minutes	20.16 minutes
99.9% ("three nines")	8.76 hours	43.8 minutes	10.1 minutes
99.95%	4.38 hours	21.56 minutes	5.04 minutes
99.99% ("four nines")	52.56 minutes	4.32 minutes	1.01 minutes
99.999% ("five nines")	5.26 minutes	25.9 seconds	6.05 seconds
99.9999% ("six nines")	31.5 seconds	2.59 seconds	0.605 seconds
99.99999% ("seven nines")	3.15 seconds	0.259 seconds	0.0605 seconds

- Probably not!

Questions You Need To Ask

■ Security

- What protections is in place to control access and prevent theft?
- How are the controls implemented?
- What independent organization has audited the controls?
- Are audit trails created? By what activities?
- Who reviews the audit trails?
 - How often?
 - Show us an audit trail
 - How many employees or contractors have been warned/terminated in the last 2 years for policy violations?
- If data is accessed do you know by who, when, and what they saw?
- If data was taken how do you know what was taken?
- How long after a breach will we be notified in writing with the details?
- When was the last time someone tried to break into your systems?

Questions You Need To Ask

- **Backup and Recover**
 - To what hardware do you perform backups?
 - At what point in the process is a backup encrypted?
 - Who has the keys for decryption?
 - What happens if that person catches the flu?
 - How does the backup get off-site to a secure location?
 - How often are backup tapes/storage recycled?
 - Do the answers make sense to an independent senior consultant?

Questions You Need To Ask

- **Disaster Recovery**

- What mechanisms do you have available in the event that there is a loss of the data center in which our applications are running?
- Are there systems onto which we can failover real-time?
- Is the failover to identical hardware with identical infrastructure?
- When was the last time they live-tested the DR solution?

Questions You Need To Ask

- Change Management
 - How is the configuration of your servers documented?
 - What is the process for initiating configuration changes?
 - What change threshold must be reached before customers are notified?
 - Modify a configuration parameter?
 - Patch software?
 - Upgrade software version?
 - Change firewall and network hardware?
 - Replace storage array?
 - Replace physical server(s)?
 - What is the frequency of patching for O/S, database, application servers, web servers?
 - Ask to view one day of change management logs and do so with an independent senior consultant

Questions You Need To Ask

- **Personnel**

- How many dedicated network admins do you employ?
- Do you have a dedicated DNS administrator do you employ?
- How many dedicated storage admins do you employ?
- How many database admins do you employ?
- How many web server admins do you employ?
- How many of these admins are direct employees and how many are contractors?
- How many of these admins are physically located in North America or Western Europe?
 - If off-shore what is the distribution, per shift, 7x24x365 of L1, L2, and L3+ resources?
- How do you keep these admins' skills up to date?
 - What is the annual training budget per person?

Questions You Need To Ask

- Infrastructure

- How many NTP servers are in the data center?
- How many DNS servers are in the data center?
- How are these assets configured and maintained?
- Do these answers make sense to an independent senior consultant?

Conclusion

Warning: The next slides are rated G

How To Go It Alone

- Buy the right hardware
 - This means do not buy based on price alone. Ten \$25,000 servers do not equal one \$250,000 server. They are far more expensive
- Hire the right internal leadership team
 - Separate technology management from people management
They are very different skills
 - You do not choose a configuration parameter by consensus
- Hire the right internal technologists
 - 2 DBAs at \$75,000/yr cost many times more than one DBA at \$150,000/yr

How To Go It Alone

- Go outside to managed services for those requirements where you can not justify going it alone
 - DNS Administration
 - Firewall Configuration
 - Migration and Upgrade
 - Network Administration
 - Storage Administration
- Get an outside, very expensive, consultant and use them like you would use an attorney: When required for their very senior skill set

Remember we started talking about mainframes?

System z10 EC is great technology that is designed to help you lower your running costs

Great Technology	Great Value	The Pricing Advantages of the Latest Technology
<ul style="list-style-type: none">▪ Low point of entry and expanded granularity: 100▪ More flexibility with more engines: 64 engines▪ More powerful specialty engines for new and different workloads: 50% or more▪ Upgradeable from previous generation IBM System z9™ and IBM zSeries® 990 (z990) servers▪ Accredited with EAL5 security classification▪ Highest Capacity / Kilowatt rating	<ul style="list-style-type: none">▪ Pay for the capacity you need, today and for future growth▪ Designed for 'right sized' configurations▪ Improved price / performance for Linux®, Java™ and eligible data serving workloads▪ Improved investment protection for z9® and z990 customers▪ The highest security rating for any publicly available server▪ Lowering the cost of electrical power and cooling	<ul style="list-style-type: none">▪ Generation to generation price / performance improvements for software and maintenance from z9 and z990▪ Consolidate x86 software licenses at up to a 30 to 1 ratio▪ Sub-capacity software pricing to better align IBM software costs with use: Lowest cost per unit of work▪ Expanded Virtualization capabilities that enable Total IT Cost savings Gold Standard

Introducing the World's first Enterprise Quad Core with the performance to replace more than 120 x86 cores.

Remember we started talking about mainframes?

z/VM Virtualization Value point #2: Environmental Cost

z10 EC – 26 IFLs

30 Square Feet

Hourly Energy Usage: 16.3 KWatts

Annual Energy Usage: 0.2 M KWatts*

Cost: \$24.6 K/year

*z/VM or x86
Virtualization?
IT Cost Implications
of Scenario #1*

**z/VM Net Savings
per year**
900,000 KWatts

\$108.4K

81% Less electricity

8 Racks of x86 Blades (304 CPUs)

43 Square Feet

Hourly Energy Usage: 87.8 KWatts*

Annual Energy Usage: 1.1M KWatts*

Cost: \$133.0 K/year

* Source of power consumption data for the Sun SunFire X2100 (1U) Opteron 2.8 GHz 1 MB server: Competitive Profiles

Become Greener with z/VM Virtualization on z10 EC: 5X better than x86 Virtualization

Thank you

and remember ... your Cloud Provider is trying to cut costs too
