The Library

The library is a spam-free on-line resource with code demos for DBAs and Developers.
If you would like to see Oracle database functionality added to the library ... just email us.
Oracle 12.1.0.1.0 has been released and content will start showing up every day for weeks.

Disclaimer

- This room is an unsafe harbour
- No one from Oracle has previewed this presentation
- No one from Oracle knows what I'm going to say
- No one from Oracle has supplied any of my materials
- This discussion is about a Beta and I am going to be very ... VERY ... careful to show you only what has been demonstrated at OpenWorld so as not to violate my NDA
- But what I am going to emphasize are precisely those things you need to know to move forward with your career

The SQL*Plus Prompt

A screenshot of the Oracle SQL*Plus application window. The window has a blue title bar with the Oracle logo and the text "Oracle SQL*Plus". Below the title bar is a menu bar with "File", "Edit", "Search", "Options", and "Help". The main text area displays the following text:

Slide Two of Three

Slide Three of Three

- Oracle has changed fundamental constructs untouched since version 6.0
- What you need to pay attention to
 - Container Database (CDB)
 - Pluggable Database (PDB)
 - The DBA role ... I been warning people to stop using it?
 - As things stand today you must learn the SYS_CONTEXT function ... you are going to need it to survive
 - Take nothing for granted in a CDB
 - Throw away tools not certified to 12c
 - If you are a DBA with 20+ years experience ... you MUST read the docs: Not doing so is not an option ... unless you want a career change

The balance of this presentation will be unscripted
and will not be available in any published form
until after the product is released.

And I spent some time making the point that the word "database" has essentially
lost all meaning.

- What does "start the database" mean?
- What does "backup the database" mean?
- What does "create a new database" mean?
- What does "the database crashed" mean?
- What does `SHUTDOWN ABORT` do?

12c: One Year Later

Should I Deploy a Container DB?

- To create a container DB: Yes or Yes?
 - Separation of duties
 - cron jobs ... they have been obsolete since version 9i
- To multi-tenant consolidate: Yes or No?
 - Patching requirements
 - Upgrade requirements
 - Backup and restore requirements
 - Security requirements
 - Infrastructure

Consolidation Effects

- What are the implications of consolidation?

- Processes
- Transactions
- Connections
- Memory
- CPU
- I/O

Do you really want to use only one TEMP tablespace?

How do you want to allocate space for UNDO?

What is "the" SYSAUX tablespace?

- Networks
- Backups and restores

Current Server Inventory Utilization

- Can we use our current servers?
or more importantly "should" we use our current servers
 - Pizza Boxes (1U, 2U, 3U)
 - Blades (H/P and Cisco UCS)
 - M10 (Fujitsu)
 - P Series (IBM)
 - Z Series (IBM)
 - T Series (Sun-Oracle)
 - M Series (Sun-Oracle)
 - ODA
 - Exadata

Rethinking Oracle

Location, Location, Location: Where you are matters

- Logging on as SYS
- What does STARTUP do?
- What does SHUTDOWN ABORT do?
- What is a common user?
- Where do you create an application user?
- Where is the SYSTEM01.DBF data file?
- How many TEMP tablespaces do you need?

Logging in as SYS

- Every shell script is broken
- Every cron job is broken
- You can do one of the following
 - Create a separate "owner" for each PDB such that each has its own home directory and ORACLE_SID environment variable
 - Do what I have been recommending for years: Move everything from the O/S to DBMS_SCHEDULER which has always been a smart move

Location, Location, Location: Where you are matters

- What does STARTUP do?
 - Depends on where you logged in
 - In CDB\$ROOT starts the instance
 - CDB\$ROOT open read/write
 - PDB\$SEED open read only
 - All PDBs MOUNTed
 - In any PDB
 - Changes the state from MOUNT to OPEN

Location, Location, Location: Where you are matters

- What does SHUTDOWN do?
 - Depends on where you logged in
 - In CDB\$ROOT shuts down all PDBs
 - In any PDB
 - Changes the state from OPEN to MOUNT
- Issue SHUTDOWN ABORT in the wrong place and you can bring down nothing or everything

Location, Location, Location: Where you are matters

- What is a common user?
- Where do you create an application user?
- Where is the SYSTEM01.DBF data file?
- How many TEMP tablespaces do you need?

Data Dictionary and Basic Objects

Data Dictionary and Basic Objects

- Basics

- Enhancements to the CREATE USER syntax
- Enhancements to the CREATE TABLE syntax
- Column Size Expansion in the Data Dictionary
- RMAN Single Table Recovery
- Online Drop Constraint
- ALTER DATABASE Move Datafile
- ALTER DATABASE Control File Management
- ALTER DATABASE Switchover and Failover Clauses
- New Temporal Validity Concept

Now Let's Talk About What's New

- SQL
 - MATCH_RECOGNIZE function for Map Reduce
 - Model Clause extended with new NEXT and PREV functions
 - USING TRUST CONSTRAINTS clause for materialized views and partitions
- Sequences
 - Identity Columns where sequences are created implicitly and bound to a table column
 - KEEP and NOKEEP affecting NEXTVAL during replays
 - Session and Global syntax for CREATE and ALTER sequences
- Materialized Views
 - New USING TRUSTED CONSTRAINTS clause

Now Let's Talk About What's New

- Tables
 - New ON_NULL clause for CREATE AND ALTER TABLE
 - New INVISIBLE clause
- Indexes
 - ALTER INDEX COALESCE includes CLEANUP syntax
 - New CASCADE clause
 - New Asynchronous Global Index maintenance clause for partitioned tables
- PL/SQL
 - New ACCESSIBLE BY clause
 - New FETCH FIRST clause
 - New PL/SQL Predefined Inquiry Directives

Deprecated

Deprecated Functionality

- Control Data Capture (CDC)
- Data Mining Java API (DBMS_DATA_MINING)
- DBMS_DBLINK built-in package
- Numerous startup parameters
- Resource Role no longer grants UNLIMITED TABLESPACE
- Streams
- Stored Outlines (use Baselines)
- WMSYS CONCAT function

Thank You
