Welcome ! Welcome to the OakTable. The OakTable network is a network for the Oracle scientist, who believes in better ways of administering and developing Oracle based systems. The network is an informal organisation, which will get together at various Oracle events, for instance the Database Forum run by Miracle every year in Denmark, OracleWorld events and EOUG forums.

Trivadis Availability Days in Zurich and Munich
Christian Antognini | 19:45:03 | 2007-04-20 -
Continuing the tradition of bringing together Trivadis and guest top specialists, Trivadis organizes this year another high class seminar. Based on the ´markets demand' for reliable and flexible IT-infrastructure, this year focus will be on data and service availability. Zurich on Jun 25-26th, Munich on Jun 28-29th.

Breach exposes 4.2 million credit, debit cards

Grocery chain says stolen numbers have led to 1,800 cases of fraud thus far

By David Sharp
Associated Press
updated 4:31 p.m. PT, Mon., March. 17, 2008

PORTLAND, Maine – A security breach at an East Coast supermarket chain exposed more than 4 million card numbers and led to 1,800 cases of fraud, the Hannaford Bros. grocery chain announced Monday.

Hannaford said credit and debit card numbers were stolen during the card authorization process and about 4.2 million unique card numbers were exposed, placing the case among the largest data breaches ever.

The breach affected all of its 165 stores in the Northeast, 106 Sweetbay stores in Florida and a smaller number of independent groceries that sell Hannaford products.

WAS YOUR LENDINGTREE FILE HACKED?

Posted: Tuesday, April 22 at 03:30 pm CT by Bob Sullivan

LendingTree has told its customers that former employees helped unauthorized mortgage lenders hack into its systems and steal customer information from 2006 to 2008.

The incident reveals just how aggressive the mortgage loan business was during the height of the housing boom, and also raises fears for consumers who share their information with companies that help them shop around for the best deal. And it highlights what experts say is an often overlooked source of data theft -- the inside job.

According to a letter sent to customers recently, former LendingTree LLC employees shared "confidential passwords" with lenders, who in turn used the login information to "access LendingTree's customer loan request forms."

Let's Get Real

CollegeInvest Clients at Risk

May 4th, 2008

Data Loss Source: CollegeInvest customers had personal information stored on a computer hard drive that disappeared during a recent move.
Date of Loss: April 30, 2008
Size of Loss : 200,000
Affected Individuals: CollegeInvest customers
Geographic Focus: Denver, CO
Data contained: Names, addresses and Social Security numbers
Additional Notes: CollegeInvest sent out letters this week to clients informing them that their names, addresses and Social Security numbers may be at risk.
Additional Information: The Gazette

Target America/UCSF Data Breach

May 12th, 2008

Data Loss Source: Information on thousands of UCSF patients was accessible on the Internet for more than three months last year, a possible violation of federal privacy regulations that might have exposed the patients to medical identity theft
Date of Loss: May 2, 2008
Size of Loss : 6,000
Affected Individuals: Patients
Geographic Focus: San Francisco, CA
Data contained: Names, addresses, patient medical record numbers and the names of the patients' physicians were available online.
Additional Notes: The breach was discovered Oct. 9, but the medical institution did not send out notification letters to the 6,313 affected patients until early April, nearly six months later.
Additional Information: San Francisco Chronicle

Pfizer Data Breach

May 13th, 2008

Data Loss Source: About 13,000 employees at Pfizer Inc. had their personal information compromised when a company laptop and flash drive were stolen.
Date of Loss: May 12, 2008
Size of Loss : 1,300
Affected Individuals: Pfizer employees
Geographic Focus: New York, NY
Data contained: Names, home addresses, home telephone numbers, employee ID numbers, positions and salaries were possibly compromised. Other information possibly lost included the department employees worked in, the Pfizer site where the employees worked, the name of employees' managers and descriptions of their jobs.
Additional Notes: The data breach, which occurred about a month ago, was the second this year affecting Pfizer Inc. employees and the sixth made public in a one-year span dating back to May 2007.

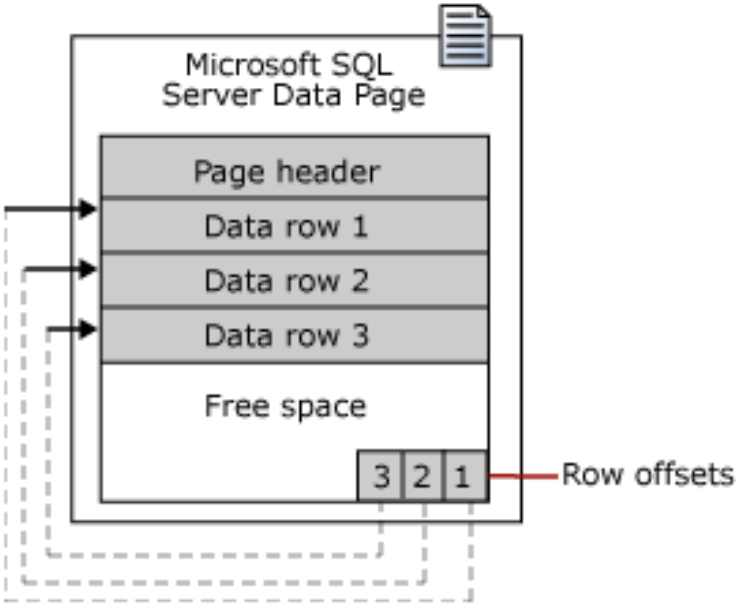
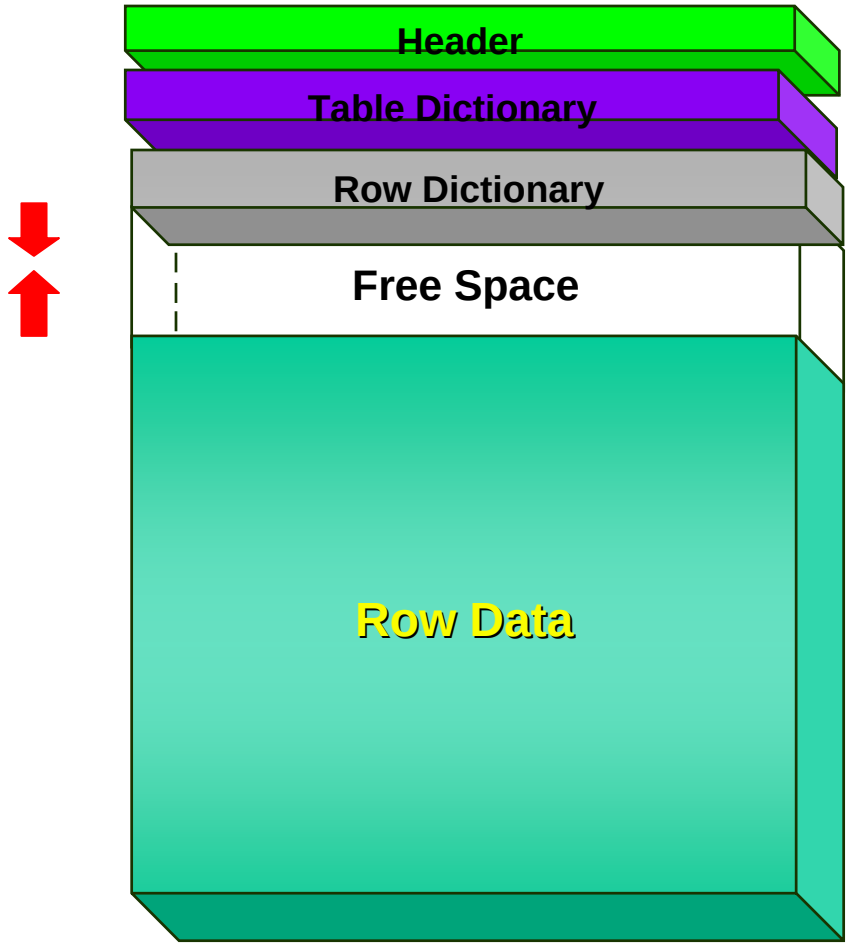
SQL Server – Anatomy of a Database Page

Data rows are put on the page serially, starting immediately after the header. A row offset table starts at the end of the page, and each row offset table contains one entry for each row on the page. Each entry records how far the first byte of the row is from the start of the page. The entries in the row offset table are in reverse sequence from the sequence of the rows on the page.



Anatomy of a Database Block



General Block Information
(Block add, Segment type)
85 ~ 100 bytes

Table info in Cluster

Row info in Block

(2 byte per row)

using when New Row Insert or Update
(pctfree, pctused)

Table or Index Data
